Proceedings of the Fifth International Conference on

HYPERBOLIC PROBLEMS:
THEORY, NUMERICS, APPLICATIONS

University at Stony Brook, New York, USA
13 – 17 June 1994

Editors

J. Glimm  J. W. Grove
M. J. Graham  B. J. Plohr

Department of Applied Mathematics
University at Stony Brook, New York
USA

World Scientific
Singapore • New Jersey • London • Hong Kong
Contents

Organizing Committee

Plenary Lectures

Singularity and Interfacial Patterns in Hele-Shaw Flows
G. Baker, M. Siegel, and S. Tanveer .................................. 1

Phase Transitions in Self-Gravitating Relativistic Fluids
D. Christodoulou ......................................................... 16

On the Courant–Friedrichs–Lewy Condition Equipped with Order for
Hyperbolic Differential Equations
R. Jeltsch, R. Renaut, and J. H. Smit ................................. 30

Nonuniqueness of Solutions of Riemann Problems Caused by 2-Cycles
of Shock Waves
B. J. Plohr, A. Azevedo, D. Marchesin, and K. Zumbrun .......... 43

Reservoir Simulation by Front Tracking
N. H. Risebro, T. Gimse, and H. Holden .......................... 52

A Survey of Granular Flow
D. G. Schaeffer ......................................................... 63

Shock-Waves and Irreversibility in Einstein’s Theory of Gravity
J. Smoller and B. Temple .............................................. 81

Invited Lectures

An Accuracy Test of a Cartesian Grid Method for Steady Flow in
Complex Geometries
M. Berger and J. Melton .............................................. 91

Shock Capturing and Global Solutions to the Compressible Euler
Equations with Geometrical Structure
G. Q. Chen and J. Glimm ............................................ 101

Theory of Conservation Laws in China
X. Ding ................................................................. 110
### Contributed Lectures

</table>
Shock-Wave Solutions of the Relativistic Euler Equations
on Non-Flat Spacetimes
J. M. Grouh .................................................. 334

Gaussian-Based Moment-Method Closures for the Solution of the
Boltzmann Equation

Irregular Reflection of Weak Shocks
J. K. Hunter and M. Brio .................................. 347

A Kinetic Formulation for Chromatography
F. James, Y. J. Peng, and B. Perthame .......................... 354

The Relaxation Schemes
S. Jin and Z. Xin ........................................... 361

Global Solutions to Hyperbolic Conservation Laws with
Umbilic Degeneracy
P. T. Kan and G. Q. Chen .................................. 368

Semi-Implicit High Resolution Schemes for Low Mach Number Flows
R. Klein, K. Lange, W. Willems, and C. D. Munz .................... 375

Existence of Solutions to Resonant Systems of Conservation Laws
C. Klingenberg and Y. G. Lu .................................. 383

A Two-Dimensional Riemann Solver for Hydro-Elastic-Plastic Materials
X. Lin and J. Ballmann ....................................... 390

On the Convergence of Vortex Methods for Weak Solutions to the
2-D Euler Equations
J. G. Liu and Z. Xin ........................................ 398

Recent Topics on the Compressible Euler Equation
T. Makino, K. Mizohata, and S. Ukai ............................ 405

The Effect of a Non-Zero Shock Width on Wave Propagation
in Multi-Dimensions
R. Menikoff, K. S. Lackner, and B. G. Bukiet ...................... 412

Viscoplastic Relaxation in Granular Flow
E. B. Pittman ............................................... 419

Dense Oscillations for the Euler Equations II
J. L. Joly, G. Metivier, and J. Rauch .......................... 425

A System of Conservation Laws with a Relaxation Term
H. J. Schroll, A. Tveito, and R. Winther ........................ 431

Fully Nonlinear Hyperbolic Systems Related to Hypoplasticity
M. Shearer .................................................. 440

A Genuinely Multidimensional Upwind Scheme for the Compressible
Euler Equations
D. Sidilkover ................................................. 447

Flame Front Tracking via In-cell Reconstruction
V. Smiljanovski and R. Klein ................................ 456

A Combined Adaptive Structured/Unstructured Technique for Essentially
Unsteady Shock-Obstacle Interactions at High Reynolds Numbers
M. Bergonzini, D. Ofengeim, M. Syschikova, E. Timofeev,
A. Fursenko, and P. Voinovich ................................ 464

Conservation Laws, Coordinate Transformations, and Differential Forms
D. Wagner .................................................... 471

3D Simulations of Colliding Hypersonic Radiative Flows in Astrophysics
R. Walden ...................................................... 478

Solving the Compressible Euler Equations in Time Dependent Geometries
M. Wierse ne Geiben ......................................... 485

Author Index .................................................. 493
